### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Felix D'Ambrosio on 10/24/06.

The application has been amended as follows:

-----

In the specification:

On page 3, line 19; delete "or irregular".

-----

In the claims:

Cancel claims 1 and 2.

Amend claim 4 as follows:

4. (Currently Amended) A method for producing a current collector for use in a secondary battery consisting of a metal foil provided with a plurality of penetrating holes, each of which has a complicated shape without burrs and satisfies the following expressions:

$$0.05 \leq S \leq 50$$

$$1.30 \leq M/N \leq 100$$

Art Unit: 1745

where: S is an area expressed in  $\text{mm}^2$  of the penetrating hole, M is a peripheral length expressed in mm of the penetrating hole, and N is a peripheral length expressed in mm of a virtual circle having the area S of the penetrating hole comprising the steps of:

passing a metal foil without a hole through between a concavo-convex roll having a plurality of convex parts and a smoothing roll under a given pressure; converting thereby portions of the metal foil without a hole and pressed by the convex parts of the concavo-convex roll into portions with penetrating holes; and passing the metal foil with the penetrating holes further through between a pair of metal smoothing rolls, whereby burrs produced at each periphery of the penetrating holes are removed.

-----

The following is an examiner's statement of reasons for allowance: the claims are directed toward a method for producing a current collector having a plurality of penetrating holes wherein the holes have a complicated shape and satisfy the expressions of claim 4. The method includes passing a metal foil without holes through a concavo-convex roll to produce a metal foil with holes having a complicated shape. The holes are smoothed between a pair of metal smoothing rolls to remove burrs.

The prior art does not teach the claimed method for producing the claimed current collector. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
